

AWS Signal

Find your direct path to success. Signal by Revenabled is a fully cloud structured AWS template to get the most out of your sales environment. From identifying assets, to managing and store all of your data and configurables, we produce solutions to create custom instructions to cut through the noise.

Storage - S3

Database - DynamoDB

oAuth - Secrets Keeper

Serverless - Lambda

API - API Gateway

Web App - Amplify

Artificial intelligence - Bedrock

Outreach - SES

CI/CD - CLI

Automation - Make.com

The purpose is to set up a custom sales engine. Where you can store your assets, update files and basically find your identity. Analyse what is working, what is not, and figure out a game plan moving forward and specific targets that might be interested in what you have.
